DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 16 January 2003 has been entered.

Claim Objections

2. Claim 15 is objected to because of the following informalities: It appears "an" before "initial" and "a" before "target" on line 3 of claim 15 should be deleted to correct an apparent typographical and grammatical error. Appropriate correction is required.

Claim Rejections - 35 USC § 102

- 3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 4. Claims 13, 16-19, 22, 23, 24, 26 and 27 are rejected under 35 U.S.C. 102(e) as being anticipated by Mustajarvi (6,356,759).

Regarding claims 13, 19, 23, and 27 Mustajarvi discloses (see Fig. 3), a radio communication system, a secondary station for transmitting a request for resources (step 3-1), a primary station for transmitting an acknowledgement (step 3-2), and a method of operating a radio communication system including a primary station and a

Application/Control Number: 09/478,467 Page 3

Art Unit: 2682

secondary station, wherein subsequent to a reception of the acknowledgement by the secondary station, control information is initially transmitted on an uplink control channel and a downlink control channel between the primary station and the secondary station (steps 3-3 and 3-4), wherein, subsequent to the reception of the acknowledgement by the secondary station, data is initially transmitted on an uplink data channel from the secondary station (3-5), with the initial transmission of data on the uplink data channel being determinedly delayed until after the initial transmission of control information the uplink control channel and the downlink control channel (step 3-5 occurring after steps 3-3 and 3-4 shows a delay by transmitting the PACCHs before data transmissions).

Regarding claims 16 and 22 Mustajarvi's teaching of the base station sending the packet resource assignment using PACCH (step 3-4) reads on the primary station dynamically determining the delay in the initial transmission of data on the data channel.

Regarding claims 17 and 26 Mustajarvi's teaching of the mobile station sending the paging packet response using PACCH (step 3-3) reads on the primary station dynamically determining the delay in the initial transmission of data on the data channel.

Regarding claim 18, Mustajarvi shows the delay in the initial transmission of data on the data channel being predetermined (steps 3-3 and 3-4 occurring specifically before step 3-5).

Claim Rejections - 35 USC § 103

5. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Application/Control Number: 09/478,467

Art Unit: 2682

6. Claims 14, 15, 20, 21, 24, 25, 28 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mustajarvi as applied to claims 13, 19, 23 and 27 above, and further in view of **Esmailzadeh et al. (6,310,868)**.

Regarding claims 14, 20, 24, 28 and 29 Mustajarvi further discloses that the Packet Resource Assignment message can comprise information related to timing advance and power control (see col. 2, line 62 to col. 3, line 3), fails to explicitly teach that the power control means is for adjusting power levels of the uplink control channel and the downlink control channel prior to the transmission of data.

In an analogous field of endeavor, Esmailzadeh discloses a method for transmission power control which can compensate for signal fluctuations in the uplink and downlink by controlling the power of a signal transmitted between a base station and a mobile station (see col. 2, lines 28-56, col. 3, lines 8-67).

It would therefore have been obvious to one of ordinary skill in the art to provide for power control in both the uplink and downlink communications in order to quickly compensate for signal fluctuations in order to avoid wasting limited communication resources such as transmission power.

Regarding claims 15, 21, and 25 Mustajarvi fails to teach that the delay in the initial transmission of data on the data channel is determined to allow for a correction of a difference between initial power level and target power levels in the uplink control channel and the downlink control channel.

Esmailzadeh teaches controlling transmission power in the uplink and downlink by comparing generated power control information with a maximum compensation

Art Unit: 2682

value in both the uplink and downlink prior to providing power compensation (see col. 5, line 29 to col. 6, line 18), suggesting a correction of power level differences.

It would therefore have been obvious to one of ordinary skill in the art to provide for power control in both the uplink and downlink communications in order to quickly compensate for signal fluctuations in order to avoid wasting limited communication resources such as transmission power.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Schiff (6,449,463) discloses a variable loop gain in a double loop power control system.

Kitade et al. (6,385,184) discloses an apparatus for transmission power control.

Whitehead (5,732,077) discloses a system allocation system that allow for collision avoidance in a wireless local area network.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles Appiah whose telephone number is 703 305-4772. The examiner can normally be reached on M-F 7:30AM-5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vivian Chin can be reached on 703 305-6739. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9314 for regular communications and 703 308-6296 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703 306-0377.
